Complete the following conditional sentences by filling in the blanks with the correct form of the verb. Each sentence relates to a step in the input-storage-process-output cycle of computers. After completing each sentence, identify which part of the computer process it represents: input, storage, process, or output.

https://www.youtube.com/watch?v=mCq8-xTH7jA

1. Zero Conditional (General truths and facts)

1. If the user __________ (press) the power button, the computer __________ (turn on).
2. If data __________ (store) on the hard drive, it __________ (remain) there until deleted.
3. If a program __________ (require) more processing power, the CPU __________ (work) harder.
4. If the system __________ (receive) no input, it __________ (not produce) any output.

2. First Conditional (Real possibilities, general conditions)

1. If the user __________ (input) the wrong password, the system __________ (not allow) access to the data.
2. If the processor __________ (work) too hard, the system __________ (slow down) significantly.
3. The printer __________ (print) the document if the correct output format __________ (choose).
4. If you __________ (connect) a USB device, the system __________ (store) the new files automatically.

3. Second Conditional (Hypothetical or unreal situations situations)

1. If the computer __________ (process) data faster, it __________ (finish) tasks in less time.
2. If there __________ (be) a power failure during the storage process, the files __________ (be) lost.
3. The software __________ (not crash) if it __________ (have) more RAM available.
4. If the input device __________ (malfunction), the system __________ (not be able) to receive commands.

3. Third Conditional (Imaginary past situations and regrets)

1. If the computer __________ (save) the document, the user __________ (not lose) their work.
2. If the input device __________ (function) correctly, the data __________ (have) been processed faster.
3. The system __________ (output) the correct result if the user __________ (input) the correct data.
4. If the backup system __________ (activate) in time, no data __________ (be) lost.
5. The storage drive __________ (not crash) if the maintenance __________ (be) done earlier.

In groups of two or three, discuss the following questions. Prepare your answers and be ready to explain them orally in class. If there are any concepts you are unsure about, feel free to research them to better justify your answers during the presentation.

Discussion Questions:

1. Why is each step of the input-storage-process-output cycle important in a computer system?
2. Can you think of a real-world situation where incorrect input could lead to an incorrect output?
3. How would you prevent errors in each step of the cycle?
4. Why is it important to follow certain rules in the input-storage-process-output cycle?
5. How can mistakes in the past, like not saving or not backing up, affect the present output?
6. Can you give an example of a Zero Conditional rule you follow when using a computer?
