

THE TOP FIVE COMPUTER CRIMES

NUMBER 1

If you use a computer, you can be a victim. A personal computer connected to the Internet without protection may be infected with malicious software in a minute. Viruses, trojans or worms can invade your computer in seconds. You should have the proper anti malware protection.

NUMBER 2

The Internet gives us the possibility to include a lot of information about ourselves. Social networks are records of our daily lives. People can have access to that data and harass you.

NUMBER 3

This is the most common example of computer crime. It is annoying to receive this in your email. You should also ensure your computer is protected from this type of malware.

NUMBER 4

The Internet is also used to exploit children. If you are a parent there are ways to control your children's online activity and stop them being victims of people who want to make money with their images.

NUMBER 5

Be careful if you log in your bank account or write personal information such as numbers, passwords or addresses. There are people who gain access to your personal information and use it to their own benefit. You shouldn't share important information in emails or messages. You should always write that information at home and not on public computers and also verify the site you are using is secure.

The internet is a great place to work together and build a better world. Nowadays, almost everybody uses the Internet to work, buy, read, watch or improve their social relationships. It is in fact a great place. However, it also has a dark side. An increasing number of domestic and international criminal activities take place using the Internet. Computer crime refers to any crime that involves a computer and a network. The computer can be used as a help to commit the crime or it also can be the target. Let's have a look at the top five computer crimes.
