

Writing Exam: Information Technology in Networks and Systems (B2 Level)

Instructions: Choose **one** of the following writing tasks. Write between **200 and 220 words**. Use relevant vocabulary related to networks, systems, and technology, and organize your ideas clearly. You will be assessed on **content, organization, language accuracy**, and **use of appropriate technical vocabulary**.

Troubleshooting Guide Writing Exam Topics

1. Topic 1: Troubleshooting Guide for Network Connectivity Issues

- **Scenario:** Write a troubleshooting guide for resolving common network connectivity problems in an office setting. Describe potential issues such as IP conflicts, router malfunctions, or cable problems, and outline steps to identify and fix each problem.
 - **Suggested Structure:**
 - **Introduction:** Briefly describe why network connectivity issues can occur.
 - **Steps:** List troubleshooting steps for common connectivity issues (e.g., checking cables, restarting the router, diagnosing IP conflicts).
 - **Conclusion:** Provide tips for preventing future connectivity problems.
 - **Example Vocabulary:** network diagnostics, IP address conflict, Ethernet cables, router reset, DHCP settings, signal interference.
-

2. Topic 2: Troubleshooting Guide for Printer Connection Problems

- **Scenario:** Write a step-by-step troubleshooting guide for resolving printer connection issues in a shared office network. Include possible causes like driver issues, network configuration errors, or hardware malfunctions, and explain how to address each one.
 - **Suggested Structure:**
 - **Introduction:** Explain the importance of reliable printer connections in an office.
 - **Steps:** Provide troubleshooting steps to resolve common printer connection issues (e.g., checking network settings, updating drivers, ensuring the printer is online).
 - **Conclusion:** Offer preventive advice, like updating drivers regularly.
 - **Example Vocabulary:** printer driver, Wi-Fi connectivity, network configuration, IP address assignment, print queue, USB port.
-

3. Topic 3: Troubleshooting Guide for Slow Internet Speeds

- **Scenario:** Write a troubleshooting guide for identifying and resolving issues that cause slow internet speeds in a home or office network. Address causes such as bandwidth overload, outdated equipment, or signal interference, and suggest practical solutions.
 - **Suggested Structure:**
 - **Introduction:** Explain why internet speed is important for productivity.
 - **Steps:** Outline steps to troubleshoot and improve internet speed (e.g., checking connected devices, updating the router, adjusting network settings).
 - **Conclusion:** Give recommendations for maintaining optimal internet speeds.
 - **Example Vocabulary:** bandwidth, router firmware, connected devices, signal interference, ISP (Internet Service Provider), speed test.
-

4. **Topic 4: Troubleshooting Guide for Operating System Startup Issues**

- **Scenario:** Create a troubleshooting guide for fixing issues that prevent an operating system (OS) from starting up correctly on a computer. Cover common causes like hardware failure, corrupted files, or incorrect settings, and explain solutions.
 - **Suggested Structure:**
 - **Introduction:** Describe common reasons for startup issues.
 - **Steps:** Provide detailed troubleshooting steps (e.g., safe mode startup, checking BIOS settings, repairing boot files).
 - **Conclusion:** Offer advice on preventing future OS startup issues.
 - **Example Vocabulary:** safe mode, BIOS, boot sequence, hard drive, system restore, error messages.
-

5. **Topic 5: Troubleshooting Guide for Wi-Fi Signal Problems in Large Spaces**

- **Scenario:** Write a troubleshooting guide for diagnosing and resolving weak Wi-Fi signals in large office spaces or homes. Include steps to identify dead zones, adjust router settings, and use signal-boosting devices.
- **Suggested Structure:**
 - **Introduction:** Discuss challenges of maintaining strong Wi-Fi signals in large areas.
 - **Steps:** Describe steps to troubleshoot signal issues (e.g., relocating the router, using extenders, changing Wi-Fi channels).
 - **Conclusion:** Provide advice for optimizing Wi-Fi coverage.
- **Example Vocabulary:** Wi-Fi range extender, access points, dead zones, channel interference, signal strength, mesh network.
